## **New FRP Equipment at TFX**

October 10, 2011

TFX is pleased to announce the recent purchase and installation of specialized chopped FRP (Fiber Reinforced Plastic) equipment, which includes low-emission applicators for gel-coat spraying.

- GS Superflow Chopper/Wet-Out non-atomized resin applicator
- GS LW05 Gelcoater

The equipment is housed in a dedicated 700 sq. ft. enclosure that includes a high-volume filter wall.

The addition of the FRP room will help TFX meet the needs of its core customers, who require resources in the full range of composite fabrication methods.

“This new capability further supports our Strategic Plan for 2011, which expands our capabilities in composite fabrication and enables TFX to respond to growing demand and compressed production schedules,” said Rick Bordonaro, Vice President of Business Development.
